

Wainwright
FABRICATORS, INC.

Wainwright Fabricators has completed projects of various size and degrees of difficulty. These range from a 400 ton unit train loadout in Southwest Virginia to a 45 foot section of 60 inch truss (*see photo above*) for a company in Eastern Kentucky. While most of our work has been in the coal industry, Wainwright has the facilities to meet most industrial fabrication needs. Whether your job is large or small, Wainwright has the capability to complete the work to your specifications. And with the onsite paint shop, we have the resources to ship your steel ready to erect.

Let us help you complete your projects on time and within budget!

We seek to provide fabricated structural steel and plate work for your new, repair and maintenance projects. The same dedication to the customer that has built a quality reputation for Romak in Virginia, Kentucky, West Virginia and Pennsylvania is also present in Wainwright Fabricators.

Fabricated Structural Steel & Plate Work to Your Specs

Wainwright
FABRICATORS, INC.

465 Hawthorne Drive
Norton, Virginia 24273

Wainwright Fabricators, Inc. provides quality, fabricated steel for industrial applications. A sister company of Romak Construction, Inc., Wainwright Fabricators was initially established to meet the fabrication needs of Romak. It quickly became apparent that other companies were in need of Wainwright's services.

As a result, Wainwright's operations have recently undergone tremendous growth.

With the construction of the new fabrication shop and the conversion of the original shop into a dedicated cleaning and painting facility, Wainwright has grown into a modern steel fabrication shop with enough flexibility to meet your structural steel and plate work needs.
